Healthy Lands - Healthy Children

Professor Colin MacDougall
Professor of Public Health and
Executive member of the Southgate Institute for Health,
Society and Equity, Flinders University; and
Honorary Principal Fellow,
Jack Brockhoff Child Health and Wellbeing Program,
Melbourne School of Population and Global Health,
The University of Melbourne

In this seminar, Professor MacDougall will argue that an Ecological Public Health has developed combining evidence about climate change the New Public Health’s focus on social determinants; and can be underpinned by children’s rights. He will present how we can situate the increasing problem of the place of children in natural disasters within an Ecological Public Health and use political theory to help overcome the powerful doubt sowers who lay siege to scientific evidence.

Professor Colin MacDougall is a public health researcher concerned with equity, ecology and healthy public policy. He is Professor of Public Health at Flinders University in South Australia and an Executive member of the Southgate Institute of Health, Society and Equity. A major research interest is exploring how children experience and act on their worlds, mainly with the Jack Brockhoff Child Health and Wellbeing Program at The University of Melbourne, where he holds an honorary principal fellow position.

Wednesday 17 June 2015
12.30 - 1.30 pm, Seminar Room 515
Melbourne School of Population and Global Health
Level 5, 207 Bouverie Street, Carlton
