Do Three-Quarter Life Crises really exist?  
A Case Study from Malawi, the warm heart of Africa

Professor Rob Moodie
Professor of Public Health, School of Public Health & Family Medicine, University of Malawi and Professor of Public Health, Melbourne School of Population and Global Health (MSPGH)

Rob Moodie has started a new role as Professor of Public Health in the Malawi College of Medicine, where he coordinates and teaches in the Master of Public Health (MPH). He also continues to teach in the Melbourne MPH and at the Eduardo Mondlane University in Mozambique. He chairs the Evaluation Advisory Committee for the Gavi Alliance and advises WHO on NCDs. He is infamous for being unceremoniously dumped as the chair of the Melbourne Storm and even less famous for being in a theatre restaurant show in Alice Springs in the 1980s.

Having been inspired by teaching such a wonderful diversity of students in the MSPGH MPH and in Mozambique, Rob decided to go to Malawi – to teach in their MPH. He will discuss the health challenges that Malawians face and the learning and teaching challenges faced by students and staff alike where there is far too much to do, with not enough people and resources. He will also discuss his own challenges of learning new educational and bureaucratic systems, a new language, and a new culture at the three-quarter time in his life.

Wednesday 7 October 2015
12.30 - 1.30 pm, Seminar Room 515
Melbourne School of Population and Global Health
Level 5, 207 Bouverie Street, Carlton
