Impact of Human Milk Oligosaccharides on Short- and Long-term Health

Dr Lars Bode
Director
Mother Milk Infant Centre of Research Excellence
The University of California
San Diego

Human milk oligosaccharides (HMO) are a family of structurally diverse complex carbohydrates that are highly abundant in human milk. Our research aims to investigate the short- and long-term health benefits of HMO.

Dr Lars Bode is the Director of the Mother Milk Infant Center of Research Excellence at the University of California. Dr Bode’s visit to Melbourne is hosted by the Allergy and Lung Health Unit and is funded by a Faculty Dyason Fellowship. We will explore the associations between HMO and allergic disease outcomes in an Asthma Australia funded sub-study of the Melbourne Atopy Cohort study.

Wednesday 3 August 2016
12.30 - 1.30 pm, Seminar Room 515
Melbourne School of Population and Global Health
Level 5, 207 Bouverie Street, Carlton
